Prerequisties for the CIDER 2015 Aspect Tutorial

Virtualbox

Please download and install virtualbox *BEFORE* the tutorial. You can download it from <u>VirtualBox</u> downloads.

Use these directions to install VirtualBox.

It is recommended that your computer have at least 3GB and preferably 4GB of memory as well as 10GB of free harddrive space to use the virtual machine.

Tutorial Image

This VirtualBox Image is 2.4GB. Download it onto the laptop you are going to use for the tutorial.

Importing the CIDER tutorial image

- 1. Run VirtualBox.
- 2. Select from the menu "Import appliance":

3. Select the downloaded cider.ova image:

Import Virtual Appliance		Import	Virtual	Appl	iance
--------------------------	--	--------	---------	------	-------

Appliance to import			
VirtualBox currently supports importing appliances saved in the Open Virtualization Format (OVF). To continue, select the file to import below.			
/home/bill/tmp/cider.ova			
6			
Hide Description < Back			

4. Select Next and Import:

Kart Color Import Virtual /	Appliance	shots
New Se	Appliance settings	
	These are the virtual machines contained in the appliance and the suggested settings of the imported VirtualBox machines. You can change many of the properties shown by double-clicking on the trans and disable others using the short back back between balance.	he list is
S Impor	ting Appliance: Importing appliance '/home/bill/D	
	Importing virtual disk image 'cider-disk1.vmdk' (2/3)	10th
	24 seconds remaining	
	RAM 2048 MB	
	S DVD	
	🖉 USB Controller 🛛 🖉	
	□ <u>R</u> einitialize the MAC address of all network cards	
	Restore Defaults < Back Import Cancel)

5. Click on start (the green arrow) to launch the image:

g the Image

age should autologin, but if needed the username is cig and the password is cig. The image does not ny connections from the network. Sudo apt-get install to install ubuntu packages.

ed Folders

I folders allow easy movement of files between your operating system (host) and the CIDER virtual (guest). These instructions will help you set up a shared folder.

is important to have a folder on your host already created, as VirtualBox's interface does not support creation.

ne VirtualBox application, highlight the CIDER virtual machine, and open its settings (in the top-bar

le ? Settings or by clicking the gear icon). In the list of tabs, select Shared Folders. Right-click Machine s and select Add Shared Folder.

pop-up, click on the arrow next to *Folder Path* and select *Other....* This should pop up a file navigator. te to and select your folder on your host machine. Be sure to also check the *Auto-Moun*t option, and hit

s time to start the CIDER virtual machine. Let it boot up, then open a terminal (Ctrl+Alt+T) and type in:

apt-get update && sudo apt-get install dkms

it for it to finish.

o into VirtualBox's topbar and select Devices ? Insert Guest Additions CD Image.... A window may pop ng to run the CD. Close or Cancel that window, and, back in the terminal, type:

edia/cig/VBOXADDITIONS_4.3.28_100309

en

sh ./VboxLinuxAdditions.run

r the command to complete, then poweroff and restart the virtual machine. You should now have a g connection between your computer and the CIDER virtual machine. The guest folder will be at /sf_<your host folder name>.

al: If you want the guest shared folder to appear on, for example, the desktop, open a terminal and run ing the brackets with your folder name):

/media/sf_<your host folder name> ~/Desktop

bleshooting

alBox VT-x/AMD-V Error

n starting the CIDER VM, you see a pop-up similar to:

" **VirtualBox – Error:** VT-x/AMD-V hardware acceleration is not available on your system. Certain guests... require this feature and will fail to boot without it.

Close VM Copy Continue"

kely, this means that you do not have hardware support for virtual machinges enabled in your BIOS are on the motherboard). To enable it, you will need to edit your BIOS settings.

g your BIOS interface requires holding down a button while your computer starts up (i.e. if your computer dy on, you will have to restart it). Usually, while your computer is starting, there will be a prompt to press n to enter the BIOS, though if your computer boots quickly, it may be hard to read. Some common to hold down are: Esc, Del, F10, F12, and Enter. If you have trouble accessing the BIOS, try looking on anufacturer's website for instructions.

ou are in the BIOS settings, you should look for the virtualization setting, sometimes called zation, Intel Virtual Technology, or something similar. Try looking under a Security or Advanced Options you are able to find the setting, make sure it is set to enabled. Then save & exit, and restart your ter. You should now be able to run the virtual machine with VirtualBox.
