

Release note summary: Cubit 11.1 - 12.0 - 12.1

Computational Modeling Sciences Department

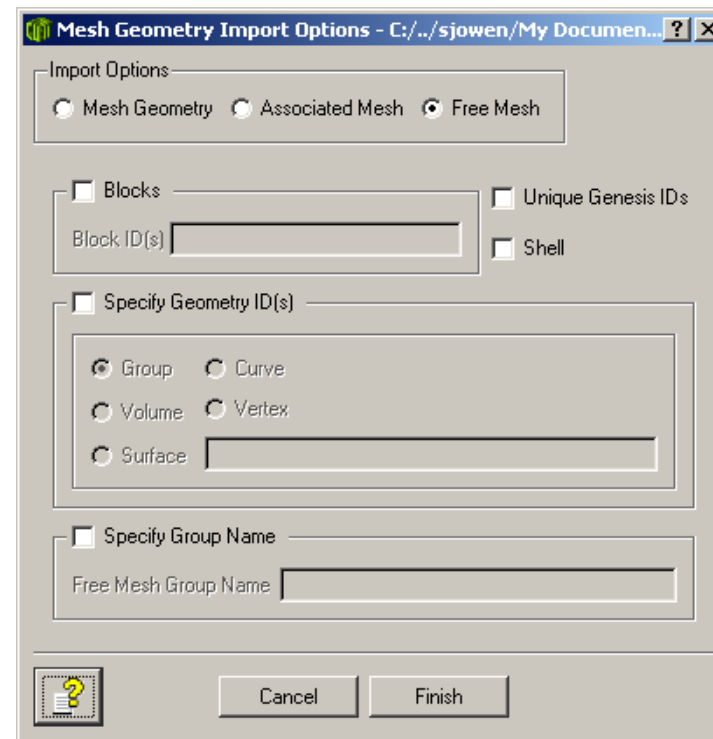

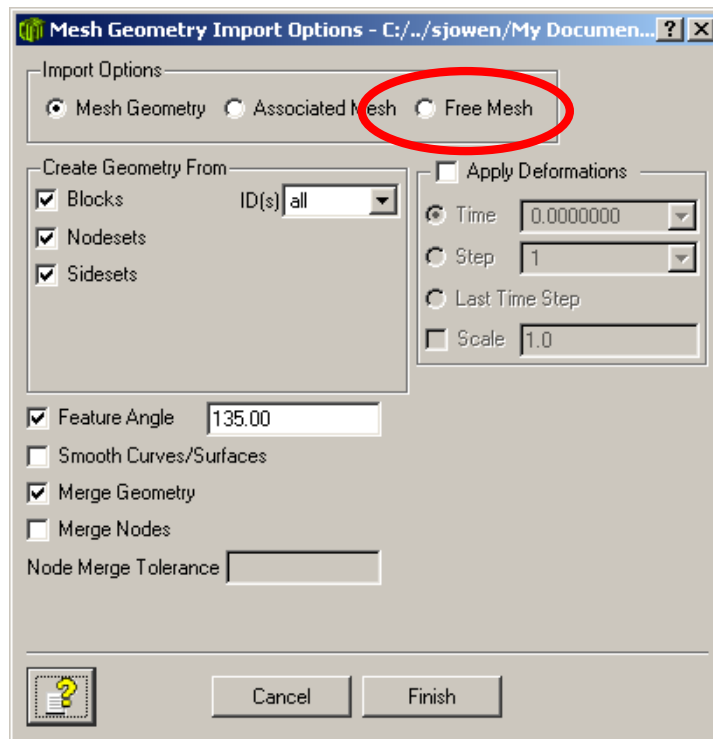

MESHING

- **Free meshes / Adaptive sizing**
 - Requires time-dependent variable in Exodus II file
- **Tet cleanup**
 - Unlike “smooth”, maintains topology
- **Edge length smoother/metric**
- **Mesh pillowing**

Free Mesh Import

Computational Modeling Sciences Department

Free Mesh

Computational Modeling Sciences Department

Geometry

Mesh

Mesh Owned
By Geometry

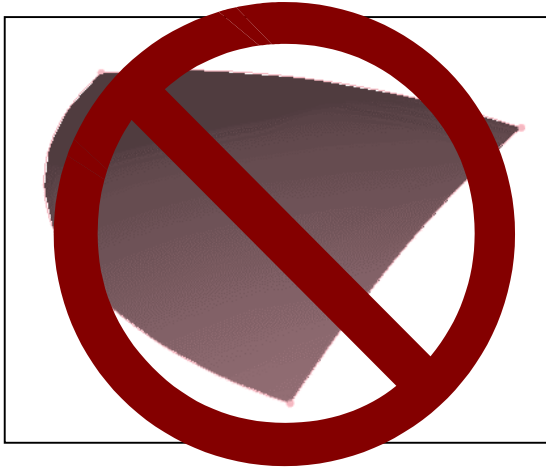

Traditionally this is the
only way mesh could
exist in CUBIT.

Free Mesh

Computational Modeling Sciences Department

Geometry

Mesh

Mesh Not Owned By
A Geometric Owner
("Free Mesh")

Now mesh can exist and
be manipulated without a
geometric owner.

Free Mesh Features

Computational Modeling Sciences Department

- **Can pull meshes in and out of association with geometry**
- **Can build geometry elements from an imported free mesh**
 - Can “snap” to target
- **Can refine, smooth, and add to free mesh, just as with associated mesh**
- **Can use scalar field on free mesh to guide sizing of new mesh on an existing geometry element**
- **Version 12.1 includes free mesh elements in “create” section of GUI**

Adaptive sizing

Computational Modeling Sciences Department

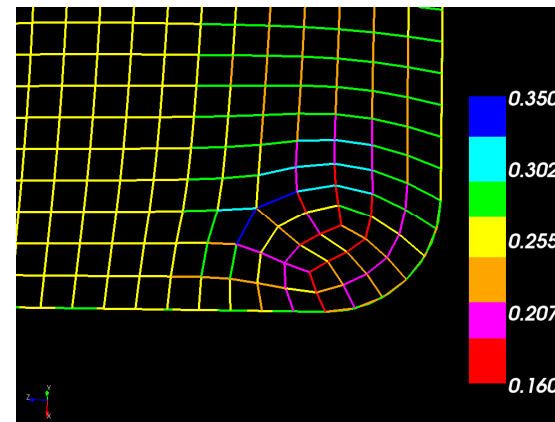

Figure 1. Plastic strain metric and the adaptively generated mesh

Edge Length Smoother/Quality

Computational Modeling Sciences Department

Mesh Pillowing

Computational Modeling Sciences Department

Improves mesh quality while preserving outer boundary

Release note summary: Cubit 11.1 - 12.0 - 12.1

Computational Modeling Sciences Department

Geometry

- Small feature detection
- Proximity detection (command line)
- More general plane definitions in webcut

Small feature detection

Computational Modeling Sciences Department

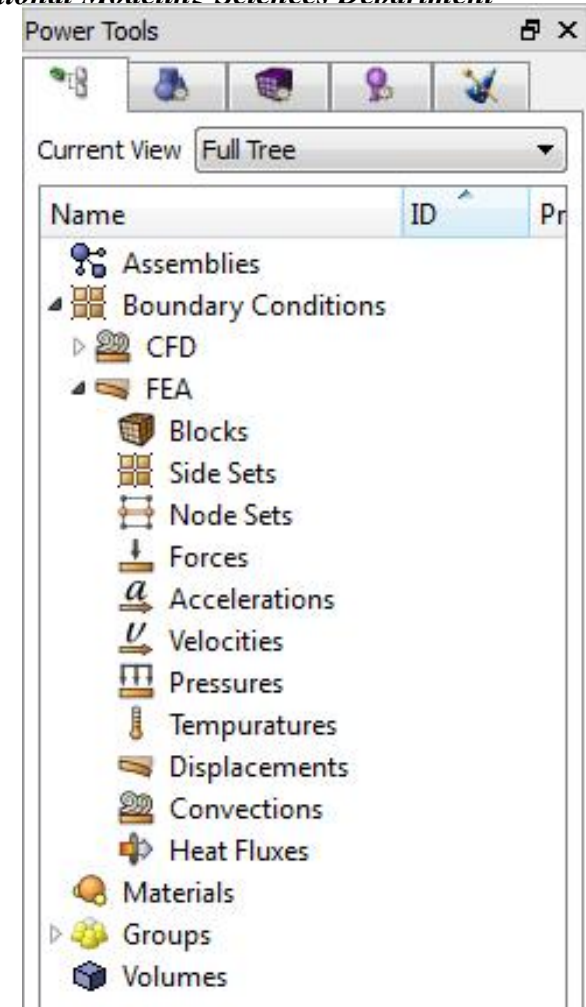

Release note summary: Cubit 11.1 - 12.0 - 12.1

Computational Modeling Sciences Department

General

- Interactive clipping plane
- Webcut preview
- Boundary condition types
- Material properties

Computational Modeling Sciences Department
